

Learning Goal

To add fractions understanding that they can make a whole number

Warm Up

Order number. Each student will be given a number - they need to order themselves. They then will see if they can get into three or four to see how close they can get to 1 whole. They sit down when they think they are done (bit of a race).

Lesson

Adding fractions with different denominators. Students will pick 4 numbered cards. They have to select what they would like for dominator and numerator. The aim is to get as close to 1 as possible. Compete against their partner.

Reflection

Write 20 words. Reflect on lesson - what skill did you learn today? Link to learning goal.

Support: Working with fractions of same denominator

Extension: Using any different operations.
